THE NORDIC CAPACITY CALCULATION METHODOLOGY PROJECT

In this newsletter, the Nordic CCM project would like to update you with the implementation of the new Nordic day-ahead and intraday capacity calculation methodologies.

Start of the external parallel run

The Nordic TSOs and the Nordic RSC jointly decided to start the external parallel run (EPR) of the Nordic flow-based methodology on 7 March 2022 for the Energy Delivery Day of 8 March 2022.

The Nordic TSOs and the Nordic RSC are working closely with the Nordic NEMOs to finalise the preparation of the EPR.

Data and market report publication

During the EPR, the flow-based parameters will be calculated and published daily on the JAO publication tool website.

Link: <https://test-publicationtool.jao.eu/nordic>

The first EPR market simulation results will be available on the Nordic RSC website at the end of March.

Link: <https://nordic-rsc.net/flow-based/simulation-results/>

The market reports of the internal parallel run are also available on the above Nordic RSC website.

Stakeholder events

On 17 March 2022, there will be an in-depth webinar on what to expect from the flow-based model. This SH event is arranged to respond to the discussions of the stakeholder meeting on 10 February.

On 23 March 2022, the next regular stakeholder event will focus on the practicalities of the EPR, e.g. introduction of the simulation facility and data publication, in addition to the elaboration of the IPR market reports.

Concerns on Stakeholder readiness

The Nordic CCM want to guide and support stakeholders towards successful go-live of the Nordic. Are we doing enough?

By sharing your needs, conditions, and experiences, you provide us with valuable feedback to enhance our support to you during this transition.

Please let us know how we may assist you further. Contact us by e-mail: ccm@nordic-rsc.net.
