

Nordic Flow-based Market Coupling Go-live expected October 2024

As previously communicated by project parties 27th September 2023, the intended go-live in Q1 2024 of the Nordic Flow-based Market Coupling, has been reassessed and deemed as unachievable. This is due to the complexity of the development and alignment of the various Nordic IT systems and processes which are needed to implement Nordic Flow-based in the European Single Day-Ahead Market Coupling (SDAC).

Since the last communication, project parties have been working together to develop an updated Nordic implementation timeline. As next step, this new timeline will be discussed at European level, to establish a joint timeline coordinated with the other on-going regional and European implementation projects.

The Nordic project parties now expect to be able to go-live with Nordic Flow-based Market Coupling in October 2024, pending successful testing and technical readiness of project parties. Market participants will be regularly updated on the planning around this new projected date during upcoming stakeholder events and through news releases, as appropriate.

The project parties have decided to continue the External Parallel Run until go-live to achieve even more experience/knowledge about the Flow-based Market Coupling.

Please direct any questions about this matter to Erik Ek, Chair of the Nordic Flow-Based Implementation Project through the Svenska kraftnät press office.
