# Bidding zone lock-in statistics

An area operates at maximum export when the sum of ATC on all exporting directions of that area is less than 1MW.

An area operates at maximum import when the sum of ATC on all importing directions of that area is less than 1MW.

An area operates in lock-in if during the same MTU it is operating at both maximum export and maximum import.

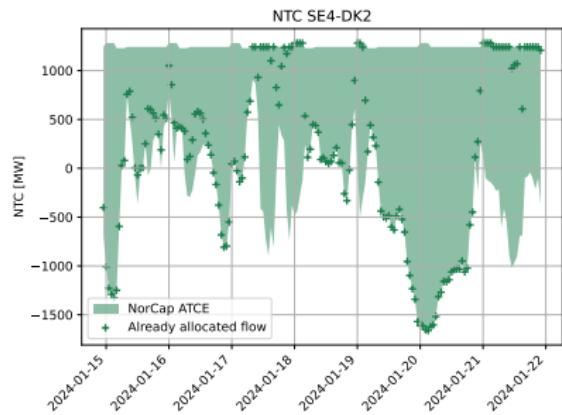

| Bidding zone | #MTUs at max Export | #MTUs at max Import | #MTUs at lock-in |
|--------------|---------------------|---------------------|------------------|
| DK1          | 0                   | 0                   | 0                |
| DK2          | 0                   | 0                   | 0                |
| SE1          | 61                  | 0                   | 0                |
| SE2          | 6                   | 0                   | 0                |
| SE3          | 0                   | 0                   | 0                |
| SE4          | 0                   | 1                   | 0                |
| NO1          | 0                   | 1                   | 0                |
| NO2          | 0                   | 0                   | 0                |
| NO3          | 0                   | 3                   | 0                |
| NO4          | 71                  | 0                   | 0                |
| NO5          | 0                   | 7                   | 0                |
| FI           | 0                   | 0                   | 0                |

# Border lock-in statistics

A bidding zone border is operating in a lock-in situation, if at a given MTU, the ATC of the bidding zone border is smaller than 1MW in both forward and reverse trading direction.

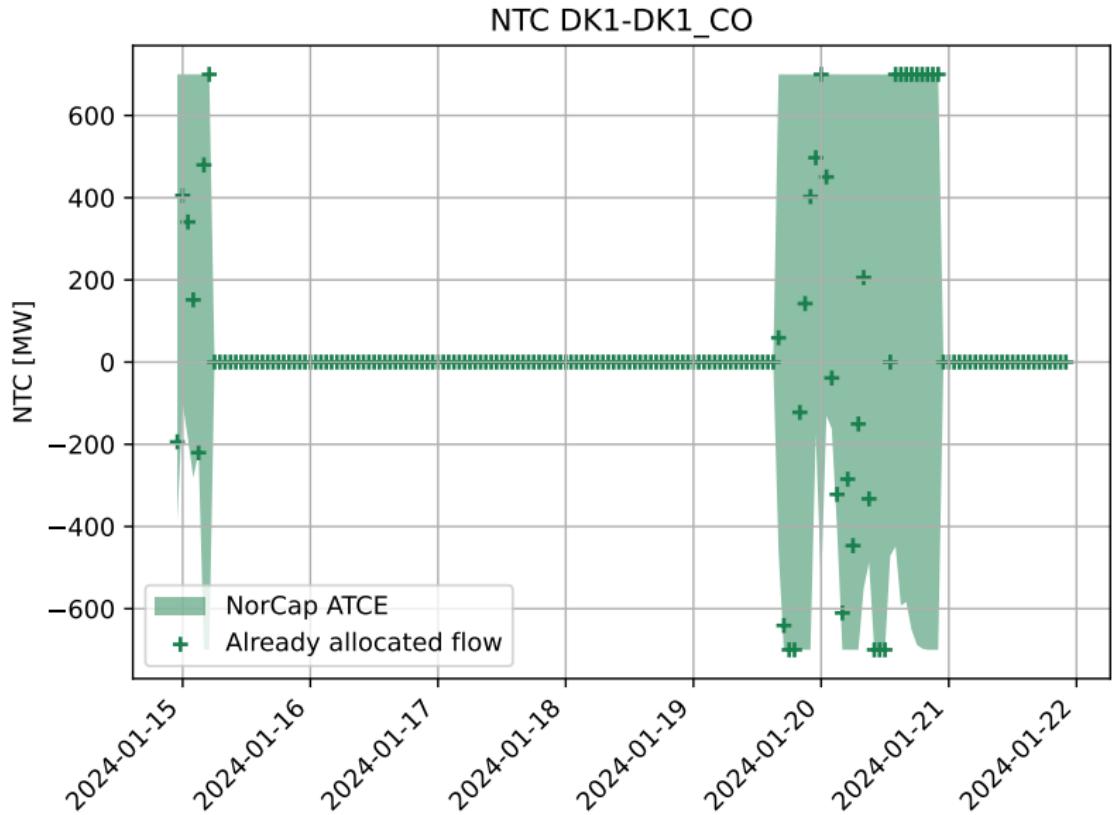

| Border     | #MTUs at lock-in |
|------------|------------------|
| SE4-SE4_NB | 1                |
| SE4_NB-SE4 | 1                |
| SE4-SE4_SP | 1                |
| SE4_SP-SE4 | 1                |

# Border NTC plots - Reader's guide

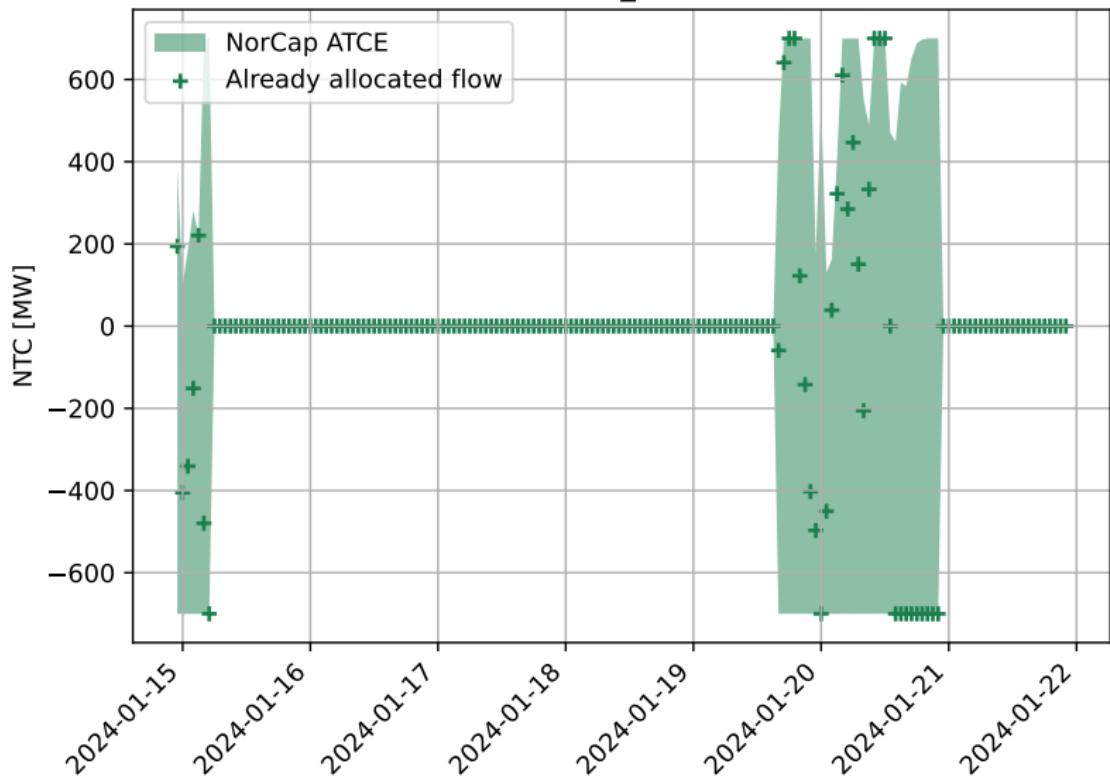

The colored area represents the possible exchange on this border and direction. The cross marks the simulated day ahead market coupling flows. Any colored area above the cross, means that intraday market will be able to increase exchange over the day ahead market coupling flows. Any colored area below the cross means that the intraday market will be able to trade against the day ahead market.

# Bidding zone trading space

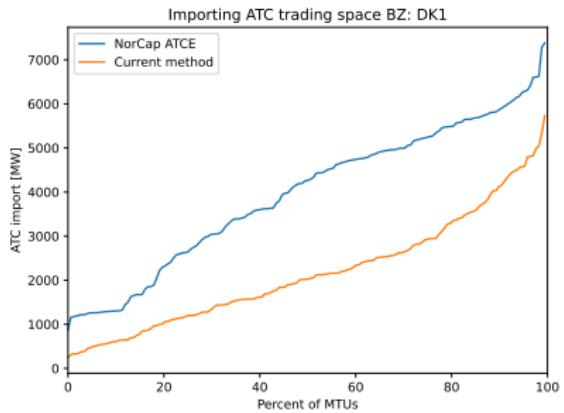

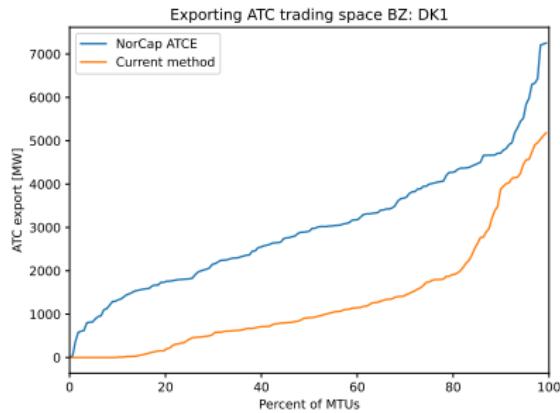

The total trading space of a bidding zone for a given MTU is the sum of export capacity and import capacity on all borders of that bidding zone for that MTU. The directional trading space is the sum of ATC on all borders of a bidding zone in either exporting or importing direction.

Disclaimer: Trading space computed by the reference method (i.e. the current method used in production) are calculated from intra-day offered ATCs collected from ENTSO-e transparency platform. It must be noted that the capacities collected at transparency platform are harmonized capacities including limitations submitted by non-Nordic TSOs and ramping constraints for some HVDCs.
