

Nordic CCM Market Report: 2024 Week 30

*For more information on the EPR and other published data consult the EPR Handbook

General Remark

This week sees an overall change for the Nordic CCR of -1.90 M€, a change of 3.05 M€ on the Hansa/Baltic border, and a change of 0.16 M€ for the external areas, resulting in a change of 1.31 M€ for the entire SDAC area*.

In week 30, the total SEW for the Nordics is smaller with FB than NTC for six out of seven days. For five days, the consumer surplus is larger in FB and for most days the congestion income is smaller with FB than NTC.

More power is exported from the bidding zones in the northern Nordics (mainly SE1, SE2, NO3 and NO4) which allows the price to decrease in particular in SE4 and NO2, which get lower average prices with FB than NTC. Some of the price peaks in SE4 observed with NTC are avoided with FB due to larger import to SE4.

*On July 25, the CZ BZ was decoupled for SDAC which affects the results for external areas. Data for CZ was excluded from the NTC results this day as CZ was not part of SDAC coupling

Nordic CCR Socio-economic Welfare Result (M€)

	DK	NO	SE	FI	Sum
Congestion Income	0.61	0.28	-3.19	-0.02	-2.32
