

# Nordic CCM Market Report: 2024 Week 31

\*For more information on the EPR and other published data consult the EPR Handbook

## General Remark

This week sees an overall change for the Nordic CCR of -6.47 M€, a change of 8.74 M€ on the Hansa/Baltic border, and a change of 0.12 M€ for the external areas, resulting in a change of 2.39 M€ for the entire SDAC area.

Negative SEW in the Nordic CCR is due to area prices in SE4 and NO2 are lowering and moving congestion income toward Hansa borders and the continent.

SE4 area price is significantly lower with FB solution. Although the flow from SE3 is only slightly higher, due to the price sensitivity of consumption and production, additional flow has a markable impact on the area price of SE4.
